September 08, 2025

Dear Expel Hiring Team,

I am excited to apply for the Senior Software Engineer position with the Workbench Engineering Team. With 7+ years of full-stack development experience and AWS certifications, I am passionate about building impactful user experiences that enhance analyst productivity.

My expertise in JavaScript, React, Node.js, and modern frameworks aligns perfectly with your tech stack. At iXora Solution, I optimized SaaS application performance by implementing modular UI architecture and comprehensive caching strategies, reducing loading times from 17 seconds to under 3 seconds. I have extensive experience with CI/CD, automated testing (Jest, Cypress), and cloud platforms, particularly AWS where I hold both Solution Architect and Developer Associate certifications.

Having collaborated remotely with teams across USA, Singapore, Japan, and Denmark for over 5 years, I understand the importance of effective remote collaboration and code quality. My disciplined work ethic and strong problem-solving abilities have enabled me to mentor developers while contributing to open-source projects used by 600+ applications.

Based in Limerick, Ireland, I am eager to contribute to Expel's mission and help shape the future of the Workbench platform as a founding member of the Ireland team.

Best regards,
B M Shams Nahid
